

Markdown Challenge

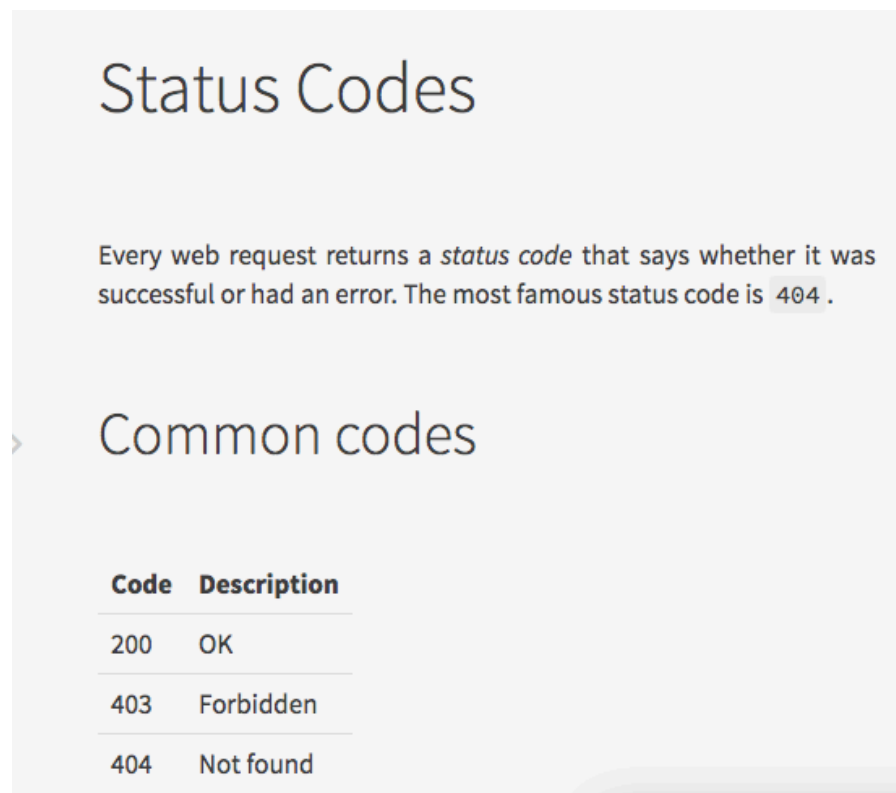

In this challenge, you will write some Markdown to create a short document that describes some web request status codes. It will contain some headers, text, and a simple table.

Follow these steps:

1. Go to <https://stackedit.io/>
2. Click on **Start Writing Now!**
3. Delete any text that currently exists in the editor
4. Use Markdown to create the documentation shown in the screen shot below.

Note that:

- “Status Codes” is heading level 1 and “Common codes” is heading level 2
- “status code” is italic
- “404” is monospace
- The table header row does not need to be bold. This is taken care of by the just making the row the header row

The screenshot shows a Markdown document with the following content:

Status Codes

Every web request returns a *status code* that says whether it was successful or had an error. The most famous status code is `404`.

> Common codes

Code	Description
200	OK
403	Forbidden
404	Not found
